innovative packaging solutions**Flexible systems: Weighing and packing in bags**

Anuga FoodTec 2024: Hastamat presents innovative packaging solutions

(Lahnau/Cologne, 28.02.2024) From March 19 to 22, 2024, Hastamat will be presenting selected systems designed for efficient and sustainable packaging of various products at Anuga FoodTec in Cologne. The packaging machine manufacturer will be showing fair visitors its latest product innovations - in hall 8.1 at stand E050.

At the Hastamat stand, visitors of the international supplier trade fair for the food and beverage industry will be able to see the benefits of the RM-270 form, fill and seal machine and the CP-16-S32 multihead weigher for Sticks in combination with a product transfer system. "With its future-oriented innovations and attractive packaging solutions, Hastamat meets individual customer requirements," says Olaf Piepenbrock, Managing Partner of Hastamat, LoeschPack and the parent company Piepenbrock.

Weighing and counting of sticks with maximum accuracy

No matter whether pet food sticks, salted sticks or salami sticks: Hastamat has specially developed its multihead weighers of the CP series to accurately dose stick-shaped products in an aligned manner.

At Anuga FoodTec, the packaging machine manufacturer will be exhibiting its flexible CP-16-S32 sticks-version with product transfer system.

The weigher in hygienic design fills different types of packages precisely to the piece. Thanks to exchangeable format parts, bulk goods can also be processed on the same weigher. The frameless design is specially designed for cleaning in wet areas. Once the products have been weighed, Hastamat transfer systems forward them on to the packaging process: "Our servo-controlled transfer systems can be flexibly combined with form, fill and seal machines, thermoforming and tray sealing machines. Thanks to the clear design logic, format changes are quick and tool-free," says Marco Hinter, Head/Director Sales and Marketing at Hastamat. The software is integrated into the multihead weighers' control system and tailored to the requirements of the food industry.

Anuga FoodTec 2024: Hastamat presents
innovative packaging solutions

Flexible packaging of products in bags

With the RM-270, Hastamat presents its vertical form, fill and seal machine from the R/RM series. The machine in a modular stainless steel design can pack a wide range of products flexibly according to customer requirements, whether in the frozen food, meat or petfood industries: "The form, fill and seal machine can handle up to 220 bags per minute and covers all format ranges and bag shapes. Also new, recyclable wrapping materials can be processed very easily," explains Hinter. At Anuga FoodTec, visitors of the Hastamat stand will discover its RM-270 producing 4-edge sealed bags. Based on the hygienic design, the machine can be supplied with water and dust protection if required. Different dosing units and special applications can also be flexibly integrated. The physical separation of the drive elements and the product side enables uncomplicated maintenance and cleaning.

Hastamat Verpackungstechnik

Hastamat Verpackungstechnik GmbH + Co. KG develops and manufactures premium packaging machines and packaging lines with a production location in Germany, and also has a global sales network. Products include vertical form, fill and seal machines, multihead weighers and stackable chip packaging lines. Hastamat has been impressing with creativity and innovation, based on decades of experience, ever since 1953. Modern and rational production methods and comprehensive quality management form the basis for technically sophisticated, efficient and high-quality machines and lines.
